Summary

SDE 3 - AI with **5+ years of experience** specializing in **Applied AI Applications, Agentic Systems, and RAG Pipelines**. Expert in building AI-native platforms using **React.js, NextJS, Node.js, NestJS, FastAPI, and Python**, with focus on Voice AI optimization, Real-time Design-Time architectures, and Agentic Workflows. Proven track record of engineering **GenAI solutions that reduced No-Code workflow complexity by 80%** (cutting node counts from ~130 to 25), alongside optimizing web applications by **20-40%**. Adept at leading full software development lifecycle from requirements to production with measurable business impact.

Skills

AI & Machine Learning: Agentic Systems, RAG Pipelines, Multi-Step Prompting, LangChain, Prompt Engineering, NLP, GenAI, LLM Integration, ML Model Integration

Frontend: React, JavaScript, TypeScript, NextJS, Redux Toolkit, HTML5, CSS, Tailwind CSS, Material UI

Backend & Microservices: Node.js, Express.js, NestJS, FastAPI, Python, RESTful APIs, GraphQL, Microservices Architecture, WebSockets, Apache Kafka

Databases: SQL, PostgreSQL, MongoDB, Oracle, Database Design, Query Optimization

DevOps & Cloud: Docker, CI/CD, Jenkins, Git, Nginx, AWS, Cloud Technologies, Automation, Selenium, Pytest, Jest

Methodologies: Agile Methodologies, Software Development Life Cycle (SDLC), Scrum, Code Reviews, Test-Driven Development

Experience

SDE 3 - AI

May 2026 – Present

GoHighLevel

- **Built Performance AI Prompt Optimizer workflows** for Voice AI agents, covering prompt evaluation, optimization review, scenario scoring, and production apply paths.
- **Designed production-safe eval-clone knowledge-base lifecycle handling**, including post-apply promote, detach, delete, and runtime cleanup behavior for optimizer-generated KB changes.
- **Improved billing and UX correctness** by fixing Performance AI daily usage from billed call-duration seconds and routing Review & Apply CTAs through a shared validation modal.

Product Development Engineer

Feb. 2025 – May 2026

Phenom People

Hyderabad

- **Engineered a universal "AI Operator" from scratch** for the No-Code platform, replacing fragmented legacy logic with a single Natural Language Interface using Agentic AI and Machine Learning. This innovation **reduced average workflow complexity by 80%** (cutting node counts from ~130 to 25), rendering manual operators obsolete.
- **Architected the Design-Time backend** using **FastAPI, WebSockets, and Microservices architecture**, enabling real-time interaction where user prompts are instantly converted into dynamic code. This system seamlessly integrates the generated logic into **Directed Acyclic Graphs (DAGs)** for secure execution during runtime.
- **Developed Agentic Map & Transform, RAG template matching, and AI Testing Suite capabilities** using **Apache Kafka, SQL, and PostgreSQL**, reducing onboarding time by **60%** and automating complex data integration logic.

Software Engineer

Aug. 2022 – Jan. 2025

Ivy Comptech

Hyderabad

- **Modernized and modularized outdated legacy codebases** following **Agile methodologies and SDLC best practices**, implementing modular architecture patterns and design principles using **React, JavaScript, TypeScript, and HTML/CSS**, which improved overall system performance, **reduced technical debt by 40%**, and decreased operational costs.
- **Reduced critical page load time by 20%** through targeted UI optimization and systematic code refactoring using lazy loading, bundle optimization, and **React component architecture** improvements with **TypeScript** for type safety, significantly enhancing the user experience.
- **Built and maintained 25+ high-quality, reusable React UI components** using **JavaScript, TypeScript, HTML, and CSS**, collaborating end-to-end through the full **Software Lifecycle** from requirements analysis and design to deployment, code reviews, and production monitoring following **Agile Technique**.

Automation Engineer

Jan. 2022 – Jun. 2022

Outlearn

Remote

- **Automated critical Student Portal workflows** using **Python, Selenium, and Pytest**, implementing Page Object Model design pattern and integrating with **SQL databases** for test data management, resulting in a **75% reduction in manual testing hours** per release cycle.

Education

B.E. in Computer Engineering

Savitribai Phule Pune University

2018 – 2022

GPA: 8.8/10.0
